

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): A polycarbonate resin composition comprising a resin mixture of

component (A) comprising

(A-1) 10 to 100 mass% of an aromatic polycarbonate resin ~~having a viscosity average molecular weight of 15,000 to 20,000~~ wherein dihydroxybiphenyl is used in an amount of 5 to ~~[[30]]~~ 50 mol% with respect to the total amount of divalent phenol as a raw material in the formation of the aromatic polycarbonate resin and

(A-2) 90 to 0 mass% of an aromatic polycarbonate resin other than the aromatic polycarbonate resin of component (A-1),

an amorphous styrene resin (B), in a mass ratio of component (A) to component (B) of ~~60:40 to 90:10~~ 50:50 to 95:5, and

a silicone compound (F), containing functional groups, in an amount of 0.1 to 0.3 parts by mass with respect to 100 parts by mass of the sum of component (A) and component (B). ~~wherein the amorphous styrene resin of said component (B) is not rubber modified and is at least one copolymer selected from the group consisting of AS resin (acrylonitrile-styrene copolymer) and MS resin (methylmethacrylate-styrene copolymer),~~

~~talc (C) in an amount of 2 to 15 parts by mass with respect to 100 parts by mass of the sum of component (A) and component (B), wherein said talc (C) has an average particle diameter of 0.1 to 20 μ m,~~

~~a core-shell elastomer (D) in an amount of 3 to 10 parts by mass with respect to 100 parts by mass of the sum of component (A) and component (B), and~~

~~polytetrafluoroethylene (G) in an amount of 0.1 to 1 parts by mass with respect to 100 parts by mass of the sum of component (A) and component (B), wherein said polytetrafluoroethylene (G) has an average molecular weight of 500,000 to 10,000,000, is capable of forming fibrils, and is classified Type 3 in accordance with the ASTM Standard.~~

Claim 2 (Canceled).

Claim 3 (Previously Presented): The polycarbonate resin composition according to claim 1, wherein the aromatic polycarbonate resin of component (A-2) is an aromatic polycarbonate resin containing polyorganosiloxane.

Claim 4 (Original): The polycarbonate resin composition according to claim 3, wherein the polyorganosiloxane in the aromatic polycarbonate resin containing polyorganosiloxane is polydimethylsiloxane.

Claims 5-6 (Canceled).

Claim 7 (Previously Presented): The polycarbonate resin composition according to claim 1, further comprising at least one kind of component selected from organic alkali metal salts and organic alkaline earth metal salts (E) in an amount of 0.05 to 2 parts by mass with respect to 100 parts by mass of the sum of component (A) and component (B).

Claim 8 (Previously Presented): The polycarbonate resin composition according to claim 7, wherein component (E) is at least one compound selected from alkali metal sulfonate, alkaline earth metal sulfonate, alkali metal polystyrene sulfonate, and alkaline earth metal polystyrene sulfonate.

Claims 9-10 (Canceled).

Claim 11 (Currently Amended): An injection-molded article made of the polycarbonate resin composition according to claim 1, ~~wherein said article has a heat resistance of 110°C or more and a spiral flow length of 35 cm or more which is measured at a temperature of 260°C, a thickness of 2 cm, and an injection pressure of 110 MPa.~~

Claim 12 (New): The polycarbonate resin composition according to claim 1, wherein the amorphous styrene resin of component (B) is at least one copolymer selected from the group consisting of ABS resin (acrylonitrile-butadiene rubber - styrene copolymer), AES resin (acrylonitrile-ethylene propylene rubber - styrene copolymer), AAS resin (acrylonitrile-acrylic rubber - styrene copolymer), MBS resin (methylmethacrylate-butadiene rubber -

styrene copolymer), AS resin (acrylonitrile – styrene copolymer) and MS resin (methymethacrylate – styrene copolymer).

Claim 13 (New): The polycarbonate resin composition according to claim 1, further comprising an inorganic filler (C) in an amount of 1 to 20 parts by mass with respect to 100 parts by mass of the sum of component (A) and component (B).

Claim 14 (New): The polycarbonate resin composition according to claim 1, further comprising an impact resistance improver (D) in an amount of 1 to 15 parts by mass with respect to 100 parts by mass of the sum of component (A) and component (B).

Claim 15 (New): The polycarbonate resin composition according to claim 7, further comprising an inorganic filler (C) in an amount of 1 to 20 parts by mass with respect to 100 parts by mass of the sum of component (A) and component (B).

Claim 16 (New): The polycarbonate resin composition according to claim 7, further comprising an impact resistance improver (D) in an amount of 1 to 15 parts by mass with respect to 100 parts by mass of the sum of component (A) and component (B).

Claim 17 (New): The polycarbonate resin composition according to claim 1, wherein the silicone compound (F), containing functional groups, is a polymer or a copolymer having a structure represented by formula (IV):

wherein

R^3 is an alkoxy group, an aryloxy group, a polyoxyalkylene group, hydrogen, a hydroxyl group, a carboxyl group, a silanol group, an amino group, a mercapto group, an epoxy group, or a vinyl group,

R^4 is a hydrocarbon group having 1 to 12 carbon atoms,

$$0 < e \leq 3,$$

$$0 < f \leq 3, \text{ and}$$

$$0 < (e+f) \leq 3.$$
